* NOTE: This is a 'working draft' sequence. It currently
* consists of 22 contigs. The true order of the pleces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.

receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune disorders. Novel polypeptides and nucleic acids homologous to transmembrane

Claim 9a; Page 143; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14 (ABB09501-ABB09524), collectively referred to as NOVX proteins, and nucleic acids encoding them (ABQ93879-ABQ93902). NOVX proteins and nucleotides are useful in the treatment, diagnosis or prevention of NOVX-associated disorders or in the manufacture of a medicament for treating such disorders, with specific applications described for each of the 24

NOVX proteins, based on their homology to known proteins. Various disorders are associated with NOVX proteins including neurological disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases), pain, behavioural disorders, addiction, tuberous sclerosis, cancers (e.g., allergies and autoimmune diseases), myasthenia gravis, asthmatic (e.g., allergies and autoimmune diseases), myasthenia gravis, asthmatic various forms of arthritis, diabetes, thyroiditis, cardiovascular disease (e.g., hypertension), reproductive disorders, endometriosis, cirrhosis, glomerular endotheliosis, alopecia, ulcers, pancreatitis, cirrhosis, glomerular endotheliosis, polycystic kidney disease, endocrine disorders, obesity, bacterial infections and particularly cardiomyopathy, atherosclerosis, cell signal processing related disorders and disorders of metabolic pathway regulation. NoVX nucleic acids and polypeptides may be used to identify cellular receptors or downstream effectors which binds to a NOVX protein, and are also useful as a targets for the cidentification of small molecules that modulate or inhibit processes such as neurogenesis, cell differentiation, cell motility, cellular complete and sequences can be used to identify a cell or tissue type and are useful as a source of primers or probes for forensic biology and for identifying and cloning NOVX homologues in other cell types. Cells comparising NOVX nowled are useful for producing non-human comminishers of the comparishment of study for studying the function and for interior and for it farms and more cell trypes. The present invention relates to the isolation of novel human proteases, and the nucleic acids encoding them. The sequences of the invention are card the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. theumatoid arthritis and psoriasis), central or peripheral nervous system diseases, migraines, pain, sexual dysfunction, mood disorders, attention disorders, hypotenosion, psychotic disorders, neurological disorders (e.g. Alzheimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections such as ocular disease (e.g. virus (HIV), and non-viral infections such as ocular disease (e.g. glaucoma) and macular degeneration. ABX31744-ABX31802 represent DNA sequences encoding for the novel human proteases of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0

The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptides of the invention may be used in the diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMMM. These include gastrointestinal disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. Crohn's disease), cardiovascular disorders (e.g. proliferative disorders, developmental disorders, epithelial disorders proliferative disorders (e.g. Alzahenko, autoimmune/inflammatory disorders, epithelial disorders reproductive disorders (e.g. Alzahenko, as disease) reproductive disorders (e.g. Catopic pregnancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               243

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      723
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           705                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  843
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      effects of exogenous compound on the expression of nucleic acid and aminacid sequences of protein modification and maintenance molecules. The current sequence represents a human PMMM encoding sequence of the invention, encoding a polypeptide which has been found to have homology
